50 Years of Plant Protection and Safe Trade in North America Opportunities to shape the future of NAPPO

Founded in 1976 by Canada, Mexico, and the United States, the North American Plant Protection Organization (NAPPO), originally known as the North American Plant Protection Agreement (NAPPA), is one of the Regional Plant Protection Organizations recognized under the International Plant Protection Convention (IPPC). NAPPO was established to strengthen regional cooperation to protect plant resources, support agricultural production, and facilitate the safe movement of plants and plant products throughout North America.

For five decades, NAPPO has provided a collaborative forum for the national plant protection organizations of its member countries. Through science-based cooperation, it has developed regional standards, technical guidance documents, and recommendations that harmonize phytosanitary measures, reduce pest risks, and support safe, efficient trade. NAPPO has also made significant contributions to pest risk analysis, surveillance, diagnostics, emergency preparedness, information exchange, and regulatory cooperation, helping strengthen plant health systems across the region.

The 2026 NAPPO Annual Meeting marks the organization's 50th anniversary and provides an opportunity to reflect on its achievements while looking ahead to future challenges. Morning sessions will highlight key accomplishments and their impact on regional plant protection. Afternoon sessions will focus on emerging issues, future priorities, and strategic planning, allowing participants to contribute to developing NAPPO's 2027-2031 Strategic Plan and its vision for the next 50 years.
