Thursday, December 7, 2023 – SYMPOSIUM - Room 1
International and Regional Phytosanitary Issues that impact the NAPPO region

Background:

The Symposium is divided into two sections. The global implementation of the 2020-2030 IPPC Strategic Framework (SF) is well underway and is the focus of Section 1. The SF identifies eight development programs (or agendas) that will address and advance initiatives and approaches that directly impact the protection of plant resources and the conduct of safe trade in the NAPPO region. Several of these development programs are well advanced in their implementation, including ePhyto, the development of commodity-based standards, guidance on the e-commerce pathway(s), and the use of third-party entities to perform phytosanitary services. Others are still in the planning stages, including three that will be presented in this Symposium. This offers participants an opportunity to contribute ideas to the implementation of these future SF programs. The last presentation in Section 1, on the impacts of climate change, will update participants on the latest advancements from the IPPC Focus Group and address NAPPO regional efforts towards predicting the impacts of climate change on regionally significant pests. Section 2 will take the form of a “conversation” about pests of concern or emerging pests in the NAPPO region. Subject matter experts will answer questions concerning each pest and will provide the latest information available for each one. After each Section, participants will form breakout groups to address specific questions and collect insights and perspectives that will be presented back to the plenary.
